FOODSERVICE**

Feeding your passion

Working towards a **GREENER FUTURE**

Philip Dennis Foodservice is committed to reducing its environmental impact and working with our suppliers and customers for a sustainable future. We understand the need to protect our natural resources and ecosystems whilst minimising our impact on the environment. Here are some of the ways we are working to a greener future...

Vehicles

To provide our quality foodservice our delivery fleet is vital, however we are taking steps to be as eco-friendly as possible.

Installation of Frigoblock freezers driven by the alternator system, further reduces CO2 emissions.

Helping our delivery fleet to consume up to 50% less fuel than trucks with diesel refrigeration machines and emitting up to 50% less CO2

Our aerodynamic canopies also reduce fuel consumption by up to 10%.

Green Electricity

We source 100% renewable energy

The combined CO2 saving power of both solar panels and wind turbine over a 20-year lifetime is the equivalent of the planting of over 100,000 trees!

Wind Turbine

Our wind turbines produce up to 60% of our electricity requirements.

Solar Power

Our solar panels can generate over 340 kilowatts of power helping to save over 20 million kilograms of CO2

Recycling

We recycle over 150 tonnes each year, including plastics, cardboard and polystyrene.

Sustainability

Philip Dennis is a member of the leading foodservice and marketing group, Caterforce. As part of its buying policies, Caterforce is introducing significant sustainable changes to the own brand Chefs' Selections range including ingredients, animal welfare, plastics and palm oil. Packaging reduction is also one of the highest priorities and as a part of our Caterforce Purchasing Group agreement, we are encouraging suppliers to reduce packaging, in particular plastic, wherever possible.

LED Lighting

Many facilities have LED energy saving lightbulbs, all on timers, powered by our renewable energy, with automatic switch off when not in use. Making us 100% light efficient.

Food Waste

Not fit for sale food items, such as dented food tins, are donated to charity, helping to provide meals for our local community.
